Once the slats have been assembled they should be centralised and screwed onto the battens on the side rails of the bed. Screws are provided in the fittings pack (2 x screws each side). The holes are already pre drilled in the metal frame where the screws are to be inserted.

Pop on your mattress and you're ready to go.

IMPORTANT: After the bed has been assembled and made up it is very important that if the bed needs to be moved then it should be lifted or dis- assembled and not dragged. If it is dragged, this will cause damage to the legs / bed.
